

RELEASE NOTES

Layout Pro 2.2.0 June, 2014

- Introduction
- New Features and Changes
- Update Procedure

Introduction

Layout Pro version 2.2.0 is a minor update containing new features and updated features.

New features and changes

New Features

- A Create Points from DXF feature has been implemented. This feature enables snapping to various CAD elements such as line intersections and line end points to create new Layout Pro points. These points can then be used for layout.
- Added a Point Pattern Editor to create and edit point patterns for such things anchor bolts. The point pattern can then be placed in the plan quickly creating the pattern to do the lay out.
- Added a new Reference Line setup. The ref line setup orients the instrument on an existing reference line.

Enhancements

- Updated the layout of the station setup wizard.

General Improvements

- Multiple issues and other general improvements were made.

Update procedure

For the update procedure and downloads, refer to Spectra Precision Partners or SpectraPrecision.com.

Layout Pro v2.2.0 enforces the requirement for a valid warranty prior to updates. The Layout Pro v2.2.0 installation program will use an Internet connection to verify the serial number of the data collector for warranty coverage. If the unit is not covered, you can continue the installation, but the software will not function until a warranty is purchased. You can also choose to discontinue the installation and keep the fully licensed version that is currently installed on the unit.

If an Internet connection is unavailable at the time of installation, and the software installed on the unit is the current minor update version, the installation will continue.

The installation program will warn you if your warranty has expired and you can choose to continue or cancel the installation at that point.
