

## Release Notes for MobileMapper CE Raw Data Logging DLL Version 1.0.0.2

12 February 2007

### Scope

This document describes changes made to the raw data logging DLL since the previously released version (1.0.0.0).

### General

This version of the DLL has been released as a solution for a problem tracking WAAS satellites that was occasionally encountered by MobileMapper CE GPS firmware. This version does not request the **SBA,DAT** NMEA message output from the GPS receiver.

### Important Note:

Although the GPS firmware still receives and applies WAAS corrections for real-time differential correction, this version of the logging software does not create any W-files for post-processing.

### New Features

None

### Defects Fixed

1. Fixes a problem tracking WAAS satellites
2. Fixes a problem reporting the correct GPS week number

### Outstanding Issues

None
