

Firmware Release Notes

GIS

Date: June 11th, 2015
Product: MobileMapper Field
Subject: MobileMapper Field 3.8.4 release notes

Introduction:

This document provides the firmware release notes of the [MobileMapper Field 3.8.4 application](#).
This version does not require a new registration code.

Upgrade procedure

Install new setup file from this link:

http://trl.trimble.com/docushare/dsweb/Get/Document-776167/MobileMapperFieldSetup_3_8_4.exe

And follow instructions

New features

- The number of layers has been increased to 60 maximum.
- The attribute name has been added at the top of the screen (for full screen keyboard).
- The new angular format Decimal Degree has been added for the display of real time coordinates (for example, longitude 78.3425674° & latitude 28.5467385°).
- The use of SHP maps with multiple layers has been added
- Vivax VlocPro Locator and RD 8000 Locator support has been added.
- Sub Attribute value use has been added for Menu Attribute.
- Multiple pictures (max 5) use has been added for a recorded point.
- Possibility to modify the attribute settings has been added for text and numeric attributes.
- Possibility to add extra attributes has been added for existing layer.
- Custom point icons have been implemented.
- New menu has been added in option window to be able to block modification, creation or suppression of a layer. In that case the three corresponding buttons are greyed. This menu is called "Profile". Modification of this setup is protected by password (4 digits). By default the Administrator mode is on and layer modification is possible.
