Spectra Precision® Survey Office – Version 4.00

The non-English versions of the Release Notes do not mention that an SPSO *Advanced Drafting* module is also available. The module, which automates plan set creation and adds CAD and COGO functionality, enables you to do the following:

- Create plan, cross-section, plan-and-profile, and plan grid sets.
- Add labels, leader lines, and tables to model or plan sets.
- Generate 3D PDF deliverables for improved visual data communication with clients.
- Draft more efficiently with the keyboard-based Create COGO command.
- Leverage tools like Legal Description Writer, Single Proportioning routine, and Map Check Report to complete cadastral workflows.

Note that all of the *Advanced Drafting* module features are also included in the *Advanced* edition of SPSO.

See your local Spectra Precision distribution partner for more information and to add this module to your installation of SPSO.
