

Influence of GNSS Antenna in Multipath Situation

Zephyr 2
in heavy multipath
environment

This data was taken in a very high multipath environment (think open courtyard with glass building walls rising up around). Both base & rover were in this environment although the base was only a few meters from a glass wall rising up to the east.

Influence of GNSS Antenna in Multipath Situation

Zephyr 2 Geodetic
in heavy multipath
environment

This data was taken immediately after the previous data set (~20 minutes was required to swap antennas), the GNSS constellation was nearly identical.
