ProMark 800 v1.6 firmware release

A new version of ProMark 800 firmware is now available. Firmware version 1.6 (**S812Ku26**) provides a number of significant performance improvements and new capabilities:

- Z-Blade RTK performance improvements provide higher fixed position reliability, especially in difficult environments
- GLONASS-only mode: standalone and RTK positioning with GLONASS satellites only
 - *Note: FAST Survey 3.1 and Survey Pro 5.2.1 (or higher) versions are required to support this feature.*
- QZSS tracking, raw data output and usage in standalone positioning
- SNR calculation algorithm: reported SNR values are more reactive, especially in dynamic conditions
- VRS network processing: TTFF improvements while operating against CMR VRS mount points

This new firmware is now available – together with release notes – on the Spectra Precision web site under the *Support* section: <http://www.spectraprecision.com/products/gnss-surveying/promark-800/>
