Aquarius 01 / 02 / 22, Sagitta 01 / 02, 3011 (all models)

Product Family:

Survey / GIS

1. PURPOSE

THALES Navigation is releasing a new firmware version (V20053) for Aquarius, Sagitta and 3011 units including the BACKUP option.

This option will be in standard in all newly delivered equipment. It is a free upgrade to existing customers

The BACKUP option is activated through an option code delivered by Thales Navigation.

This Product Marketing Update defines the process to activate the BACKUP option.

2. CUSTOMER NOTIFICATION

All RSMs will receive this Product Marketing Update for information of their channels / customers.

3. BACKUP OPTION ACTIVATION

The BACKUP option is activated through an option code delivered by Thales Navigation generated from the equipment "Receiver code". This "Receiver code" shall be provided by the customer.

3.1 Receiver Code Identification

The receiver code can be identified through a remote control command or using the TRM100 display unit

- **Remote Control command**

Send : \$PDAS,OPTION

Return: \$PDAS,OPTION,0,RCVRCODE, [abcde]

- **TRM100**

Press AUX (F3)

Press VERSION (F3)

Read "Aquarius n°xyz – [abcde]"

[abcde] is a 5-digit code starting with "2". This code shall be provided to THALES Navigation.

3.2 Option Code Input

The option code (a 13-digit number) provided by THALES Navigation is input through a remote control command

Send : \$PDAS,OPTION,19,BACKUPMODE,[abcdefghijklm]

3.3 Verification

Verification can be performed through a remote control command or using the TRM100 display unit

- **Remote Control command**

Send : \$PDAS,OPTION

Return: \$PDAS,OPTION,0,...

... ..

\$PDAS,OPTION,19, BACKUPMODE,[abcdefghijklm]

- **TRM100**

Press AUX (F3)

Press VERSION (F3)

The BACKUPMODE option is listed as the last activated option (last line)
