## WADGPS mode Aquarius, Sagitta & 3011

### Product concerned

Product Names:

**Aquarius 01, Aquarius02, Aquarius22, Sagitta01, Sagitta02, 3011**

Product Family:

**Marine & Sensor**

### 1. ANOMALY

It has been reported recently an abnormal behaviour of Aquarius, Sagitta and 3011 receivers from Magellan when operated in WADGPS using EGNOS satellites.

The quality index switches from 0 to 9, back and forth when WADGPS using EGNOS satellites (120, 124 or 126) is selected.

This anomaly seems to be linked to tests performed by the future GAGAN (Indian) SBAS satellite.

### 2. SOLUTION

Magellan is conducting further analysis. An immediate solution is to deselect the ranging information from these satellites.

To do so :

- Menu : AUX / INIT / DESEL (F3 / F2 / F4)
- Enter 120, 124, 126
- validate.

### 3. CUSTOMER NOTIFICATION

All RSMs will receive this Product Marketing Update for information on their channels / customers.

This Product News will be posted on the Dealer web site.
