

Additional installations of the Post Processing DLL for ArcPad 10

The installation instructions on page 1 of the Post Processing DLL for ArcPad 10 Getting Started Guide will work just fine for the first installation of the Post Processing DLL on the MobileMapper 100 but subsequent installations for multiple receivers or reinstallation on the same receiver will require a different procedure.

When the Post Processing DLL is installed the first time a program is added to the programs menu as illustrated in the following screen shot.

Use this Program to perform subsequent installations of the Post Processing DLL.
