DATE: **MAY 23, 2012**
PRODUCT: **GNSS TOOLBOX**
SUBJECT: **NEW GNSS TOOLBOX SW RELEASE**
NUMBER: **V3.5** (3.5.3)

## Introduction

This version is an update of GNSS Toolbox v3.0 including several new features and enhancements and well as bug fixing.
**This new version is compatible with W213Hs26 (or higher) FW version.**

## Upgrade procedure

Upgrade procedure:

To install the new GNSS Toolbox on your device, you must establish a Microsoft ActiveSync connection between your PC and the GNSS receiver, copy the GNSS Toolbox 3.5 CAB file and execute it on the GNSS device. Then follow the instructions.

## New features/Enhancements

- All languages integrated into a single installation package and depends on the corresponding country selected under Regional Settings of the HW platform
- GLONASS only tracking mode in GNSS Toolbox. Now GLONASS L1 and GLONASS L1/L2 selections are possible
- Base receiver type selection
- Displaying QZSS satellites in Monitor/Skyplot and SNR screens
- Switching QZSS tracking on/off in GNSS Toolbox
- Added U-link protocol for ADL radio
- Support for XDL Micro radio type in RTK rover setup
- Installation of the GNSS Toolbox SW from the Windows 8 PC
